The prior arts fail to teach to fairly suggest a nonvolatile memory card in which a program is added, modified, changed, or the like by selecting an arbitrary firmware on a flash memory from a plurality of pieces of firmware stored on said flash memories. The main advantage including a controller having a volatile memory for storing said firmware from a non-volatile, multi-valued, flash memory, and when a firmware selecting instruction (from said controller) is made valid, said controller selects one arbitrary firmware from two or more pieces of firmware which can be stored in said volatile semiconductor memory, and then accesses said volatile memory and executes a process programmed in said firmware.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
